Career Objective

Data Engineer with hands-on experience designing and building scalable ETL/ELT pipelines, data quality frameworks, and cloud-native data platforms using Microsoft Fabric, PySpark, Delta Lake, SQL, and REST APIs. Skilled in data modeling, data warehousing, distributed data processing, and Big Data pipeline orchestration, with a strong foundation in Python and Azure cloud services, seeking to deliver reliable, high-quality data solutions for data-driven decision-making.

Education

Chandigarh University — Mohali, Punjab

B.E. in Computer Science Engineering | CGPA: 7.85 — *Aug. 2022 – Jul. 2026*

Technical Skills

Languages: Python, SQL, C++
Data Engineering & Orchestration: Microsoft Fabric, Azure Data Factory, Delta Lake, ETL/ELT Pipelines, REST APIs
Big Data & Processing: PySpark, Distributed Data Processing, Batch Data Processing
Cloud & Storage: Microsoft Azure, Azure Blob Storage, Azure Data Lake Storage (ADLS Gen2), Azure Cosmos DB
Databases: SQL Server (SSMS), MySQL, Cosmos DB, Data Modeling, Data Warehousing
BI & Visualization: Power BI (Dashboards, DAX, Data Modeling)
Tools & DevOps: Git/GitHub, Docker, VS Code, CI/CD Fundamentals
Core Concepts: Data Quality & Validation, Data Pipeline Design, Data Lakehouse Architecture, Machine Learning, Deep Learning, NLP

Experience

Software Engineer Intern – Optimus Information Inc. — Mar 2026 – Aug 2026

- Engineered scalable data quality and ETL validation frameworks on Microsoft Fabric using PySpark and REST APIs, streamlining pipeline testing across multiple data sources.
- Designed reusable data quality checks with Delta Lake-based logging and quarantine architecture, improving failure detection and end-to-end data traceability.
- Built source-to-Gold layer validation pipelines and Power BI dashboards, boosting pipeline reliability and enabling real-time data observability for stakeholders.

Projects

Data Pipeline using Microsoft Fabric & PySpark — Jun 2026 – Jul 2026

- Architected an end-to-end batch data pipeline using Microsoft Fabric, PySpark, and Azure Data Lake Storage for scalable, high-volume data processing.
- Optimized data storage and query performance using Delta Lake and partitioning strategies, improving pipeline reliability and scalability.

Medallion Lakehouse & BI Reporting Pipeline — Apr 2026 – Jun 2026

- Designed a Bronze-Silver-Gold medallion lakehouse in Microsoft Fabric, using PySpark notebooks to clean and transform raw ADLS data into curated Delta tables.
- Modeled a star-schema (fact/dimension) design in the Gold layer and built interactive Power BI dashboards for sales and performance reporting.
- Orchestrated end-to-end pipeline scheduling and triggers with Azure Data Factory, reducing manual refresh effort and improving data freshness.

Incremental CDC Data Ingestion Pipeline — Feb 2026 – Apr 2026

- Built an incremental ingestion pipeline with Azure Data Factory and SQL Server Change Data Capture (CDC) to sync only modified records, cutting pipeline runtime.
- Implemented Slowly Changing Dimension (SCD Type 2) logic in PySpark to preserve historical record versions, with semi-structured data stored in Azure Cosmos DB.
- Containerized pipeline components with Docker and added schema/data validation checks to ensure consistency across ingestion runs.

Certifications

Microsoft Certified: Fabric Data Engineer Associate (DP-700)
Microsoft Certified: Fabric Analytics Engineer Associate (DP-600)
Microsoft Certified: Azure Fundamentals (AZ-900)
Databases and SQL for Data Science with Python
Cloud Computing – Elite Silver Certification (NPTEL)

Achievements

Certificate of Achievement: Top 5% in Talent Park by Unstop.
Performer of the month: received performer of the month award for delivering exceptional work on a client project during internship at optimus information.
Competitive Coding: Solved 300+ DSA problems on LeetCode with a focus on algorithms and data structures.
